## §417.417

the launch vehicle has a land or water impact. These procedures must include the following provisions:

- (1) Evacuation and rescue of members of the public, to include modeling the dispersion and movement of toxic plumes, identification of areas at risk, and communication with local government authorities;
  - (2) Extinguishing fires;
- (3) Securing impact areas to ensure that personnel and the public are evacuated, and ensure that no unauthorized personnel or members of the public enter, and to preserve evidence; and
- (4) Ensuring public safety from hazardous debris, such as plans for recovery and salvage of launch vehicle debris and safe disposal of hazardous materials.

## §417.417 Propellants and explosives.

- (a) A launch operator must comply with the explosive safety criteria in part 420 of this chapter.
- (b) A launch operator must ensure that:
- (1) The explosive site plan satisfies part 420 of this chapter;
- (2) Only those explosive facilities and launch points addressed in the explosive site plan are used and only for their intended purpose; and
- (3) The total net explosive weight for each explosive hazard facility and launch point must not exceed the maximum net explosive weight limit indicated on the explosive site plan for each location.
- (c) A launch operator must establish, maintain, and perform procedures that ensure public safety for the receipt, storage, handling, inspection, test, and disposal of explosives.
- (d) A launch operator must establish and maintain each procedural system control to prevent inadvertent initiation of propellants and explosives. These controls must include the following:
- (1) Protect ordnance systems from stray energy through methods of bonding, grounding, and shielding, and controlling radio frequency radiation sources in a radio frequency radiation exclusion area. A launch operator must determine the vulnerability of its electro-explosive devices and systems to radio frequency radiation and estab-

lish radio frequency radiation power limits or radio frequency radiation exclusion areas as required by the launch site operator or to ensure safety.

- (2) Keep ordnance safety devices, as required by §417.409, in place until the launch complex is cleared as part of the final launch countdown. No members of the public may re-enter the complex until each safety device is reestablished.
- (3) Do not allow heat and spark or flame producing devices in an explosive or propellant facility without written approval and oversight from a launch operator's safety organization.
- (4) Do not allow static producing materials in close proximity to solid or liquid propellants, electro-explosive devices, or systems containing flammable liquids.
- (5) Use fire safety measures including:
- (i) Elimination or reduction of flammable and combustible materials;
- (ii) Elimination or reduction of ignition sources;
- (iii) Fire and smoke detection systems:
- (iv) Safe means of egress; and
- (v) Timely fire suppression response.
  (6) Include lightning protection on each facility used to store or process explosives to prevent inadvertent initiation of propellants and explosives due

explosives to prevent inadvertent initiation of propellants and explosives due to lightning unless the facility complies with the lightning protection criteria of §420.71 of this part.

(e) A launch operator, in the event of an emergency, must perform the accident investigation plan as defined in §417.111(h).

APPENDIX A TO PART 417—FLIGHT SAFE-TY ANALYSIS METHODOLOGIES AND PRODUCTS FOR A LAUNCH VEHICLE FLOWN WITH A FLIGHT SAFETY SYS-TEM

## A417.1 SCOPE

The requirements of this appendix apply to the methods for performing the flight safety analysis required by §417.107(f) and subpart C of this part. The methodologies contained in this appendix provide an acceptable means of satisfying the requirements of subpart C and provide a standard and a measure of fidelity against which the FAA will measure any proposed alternative analysis approach. This
